

Printer Profile Manager Enterprise for Healthcare

ROBUST REMOTE MANAGEMENT FOR ZEBRA LINK-OS® PRINTERS

Managing your printers is a time-consuming and costly effort. Your printers are located throughout your hospital campus. You may have multiple facilities across town or across the country. And many printers are located in areas where there are patients, creating delays while technicians wait for patients to leave an area to configure, update or troubleshoot. As a result, implementing critical updates, such as a new security configuration, can take days or even weeks. Now, you can manage all your Link-OS® printers in all of your locations with Printer Profile Manager Enterprise from Zebra. You get the most fully-featured remote printer management solution in this class, with convenient browser-based anywhere, anytime printer management. Minimize management time and cost and maximize uptime for your printers with Printer Profile Manager Enterprise, only from Zebra.

Anywhere, Anytime Browser-based Printer Management

Access Printer Profile Manager Enterprise from virtually any device with a browser, including a laptop, desktop or tablet.

Easy to Install

Setup is fast and easy with the integrated self-installer.

Automatic Printer Discovery

Instantly discover any printer that is on the network — no need to physically visit and walk through a site to locate printers.

Create Printer Groups for Greater Management Simplicity

Quickly and easily organize printers with tag names you create to sort your printers into logical groups, taking printer management simplicity to the next level. With the press of one button, you can check status, initially configure or update a specific group of printers, such as printers in a specific department or a specific type of printer in one location — or all locations.

Create and Store Printer Profiles

Create and save a library of profiles that can be distributed to printers at any time.

Simple 'Click-to-configure'

No matter how complex your configuration needs may be, we've made it easy. Over 300 settings are logically grouped into categories and accessible via tabs, allowing you to quickly and easily locate the settings you want with just a click or two for fast and easy configuration.

Choose When to Update

Schedule printers to update as soon as the printer is powered up and visible on the network, or pick a time and date to minimize disruption.

Maximize Printer Uptime with Instant at-a-Glance Printer Status

No matter how many printers you have, or whether they are in one location or locations around the world, a dashboard with intuitive red, yellow and green visual alerts makes it easy see the status of your printers in real time. Now it's easy to identify and quickly triage issues to maximize printer uptime — and healthcare worker productivity. A red error signifies printers are in need of immediate attention, and a text label identifies the basic issue, such as battery health or an open printer head. Yellow indicates a warning or pending issue that is in need of attention, with a text label that identifies the problem, such as a printer that is paused or out of the operating temperature range. And a green icon signifies a healthy on-line printer.

Built-in Security

A direct, secure, encrypted connection to printers protects sensitive data to help ensure compliance with standard IT practices.

Easily Manage Important Label Objects

The integrated font and graphics converter makes it easy to manage label template objects, such as fonts and graphics, optimizing print times.

Multiple User Roles for Granular Control Over Permissions

Permissions allow you to easily control not only who has access to printers — but also what users can access. With Single Sign On technology, you can define the settings and tools for any type of worker, such as Administrators, Technicians and Users. For example, you can give administrators access to all tools and settings, technicians access to only those settings and tools needed for everyday maintenance, and users "display-only" access.

Minimize management time and cost and maximize uptime for your printers.
