

## ZC10L Card Supplies

The cards you print for your events or seasonal passes, should not only identify attendees, but also present your brand in a positive light. With stunning images and graphics, your badges can be transformed from ordinary access tools to cherished guest mementos.

Zebra printing and supplies enable you to create high-performing cards that are aesthetically pleasing. We provide consistent results with every print job while minimizing wear and tear on critical printer parts — delivering exceptional print quality with reduced overall maintenance costs.

### Media Kits

ZC10L kits include the exact amount of 17 or 24 mil cards and color ribbon to print 400 cards, so you exhaust the cards and ribbons at the same time.

Choose from the following card options:

#### Standard Cards

Zebra's 17 and 24 mil PVC cards, specifically designed for the ZC10L, are durable enough for multi-day events or seasonal passes and deliver exceptional photo quality images.

#### Environmentally Friendly Cards

Zebra offers environmentally friendly options to reduce the impact on the environment.

##### 100% Recycled

- Manufactured in the US, using scrap PVC materials previously used for cards or from excess generated by the creation process. It delivers the same performance as a standard card but has a slight off-white appearance.

##### Biodegradable

- 99% of PVC cards biodegrade in nine months to five years when placed in a commercially controlled landfill with soil, water, compost, or whenever in continual contact with microorganisms.

#### Ribbons

Zebra True Colors® card printer ribbons produce high-quality images and extend the life of your printers and cards. Experience vibrant colors, “true-to-life” flesh tones, and sharp barcodes and text. Our patented printer ribbon technology minimizes printhead buildup and delivers durable cards.

Media kits come with YMCKO ribbons as standard. We offer the option to purchase black ribbons separately for the added ability to print guest instructions or “fine print” on the backside of cards.

## Security Features

Restrict access to your event with a custom card including an overt (visually obvious) or covert (not identifiable to the naked eye) security feature. Using a security feature will protect your event from revenue loss and unwanted guests by making it difficult for someone to duplicate it, and easy for you to identify counterfeits.

### Overt Security Options

These security features are visible and difficult to replicate.

#### 1. Holographic Foil

Stamping of a 2-D holographic foil onto the card. The holographic foil is created so that it bends light, creating the illusion of a two-dimensional surface.

#### 2. Optical Variable Ink (OVI®)

Inks are applied to create a noticeable color shift when rotated either up and down or left to right.

#### 3. Guilloche Pattern

Printing of a highly complex, multiple-color design pattern in a designated area on the card. The design is generated by a mathematical formula that is virtually impossible to reproduce by a copy machine or to re-create digitally.

#### 4. Spot UV

UV ink is applied to an area (or areas) you designate to create a raised glossy image, adding depth and contrast.

#### 5. Metallic Ink

Image printed in a designated area with an ink that contains metallic particles that reflect light and create a metallic sheen.

### Covert Security Options

These security features are hidden and not visible to the naked eye, requiring staff to use a tool to view them.

#### 6. UV Black Light Reactive Ink

Image is printed in designated area with ink that glows under an ultraviolet light, requiring the use of a black light to view it.

#### 7. Micro Text

Small text that is only visible with an 8x or 10x magnifying glass or microscope is printed in a designated area on the card; typically has a predetermined misspelling or transposed character.
